

GRP BATHROOM POD

One-piece shell. Zero joints.

A bathroom module with floor, walls and shower tray moulded as a single piece. Size and design are tailored to your project. Built in the factory, plumbed and tested, then delivered to site ready to use.

**01 Fully watertight**

No grout, no silicone. Leak paths are designed out.

02 One-piece strength

Floor and walls work as one body and resist impact.

03 Fast installation

Craned into place and connected to services. No wet trades on site.

04 Hygienic surface

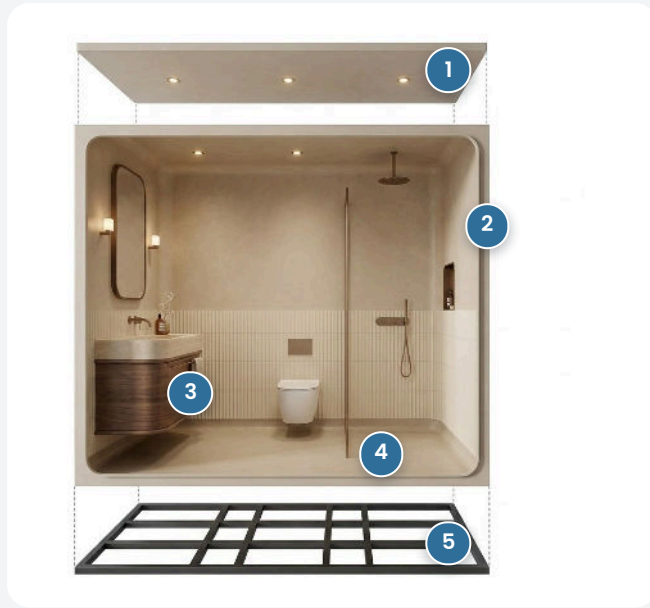

Non-porous gelcoat and radiused corners keep dirt out.

05 Premium interiors

Wood, travertine and marble finishes, specified to your brand.

06 Long service life

Built to perform for the full life of the building.

One shell, five layers.

- 1 Separate roof panel**
Fitted on site, gives top access to services.
- 2 One-piece GRP shell**
Floor, walls and ceiling from one mould, gloss gelcoat finish.
- 3 Interior and fit-out**
Sanitaryware, brassware and furniture installed in the factory.
- 4 Integral shower tray**
Falls moulded in, no step, slip-resistant finish.
- 5 Galvanised steel subframe**
Levelling, transport and crane lifting points.

Same shell, different character.

These are example concepts. Every pod is built to your project in size, layout and interior design.

Specification

CONSTRUCTION	One-piece moulded GRP composite
FLOOR	Integral anti-slip gelcoat, shower tray with falls
WALLS	Seamless gelcoat, optional fluted texture
CORNERS	Radiused, no water or dirt traps
SERVICES	Pre-installed and factory tested
SIZE	Specified per project

WetPod.

A bathroom that runs on its own.

The same GRP pod with its own water, power and heating built in. Water and electrics sit in separate insulated compartments. No mains needed.

**Different Shapes.
Endless Designs.**

Built-in systems

- 01 Fresh water tank**
Insulated tank under the basin, with external fill point.
- 02 Pump and pressure system**
Water pump, pressure accumulator and inline filter.
- 03 Grey water tank**
Sits directly under the shower drain, with a drain valve.
- 04 Composting toilet**
Waterless, no black water. Vented out through the roof.
- 05 Battery bank**
Lithium batteries in a sealed, insulated dry compartment.
- 06 Electrical system**
Inverter charger and breaker panel. Mains, solar or generator input.
- 07 12V water heater**
Compact boiler in the wet compartment, runs on the battery system.
- 08 Roof ventilation fan**
28 x 28 cm extractor fan in the ceiling.

IDEAL FOR Remote sites, workforce camps, events, glamping, emergency use.
